## ABSTRACT

This publication reports statistics on persons with mental retardation and related conditions in state-operated residential facilities in the United States, based on a survey questionnaire completed by 50 states and the District of Columbia. Part 1 presents 12 tables that provide facility, population, and cost statistics for Fiscal Year 1990 that were compiled within state agencies. It includes statistics on small and large state-operated mental retardation facilities and facilities designated primarily for populations other than persons with mental retardation (in the vast majority of cases, psychiatric facilities). Part 2 places 1990 statistics within the longitudinal context of data gathered on state institution populations, resident movement, and costs of care since 1950. Part 3 includes a directory of public residential institutions (16 or more residents) for people with mental retardation/developmental disabilities. The directory lists facilities operating on December 31, 1990; those closed since 1960; and those projected to close by 1995. A list of 5 references and 28 data sources is included, along with state notes and notes concerning longitudinal data presentation. (JDD)

## ACKNOWLEDGMENTS

This report is one of a series that since Fiscal Year 1978 has presented basic population statistics on people with mental retardation and related conditions in state-operated residential facilities in the United States. The statistics reported here were gathered with support from the Administration on Developmental Disabilities (Grant No. 09DD0180/02). The authors wish to thank the Administration on Developmental Disabilities, and particularly Commissioner Deborah McFadden, and our Project Officer, Gail Evans, for their continued support of this project. The authors are especially grateful to the state mental retardation/developmental disabilities program directors and the individuals in their agencies who supply the state statistics. Regrettably they are too many to acknowledge individually, but without them this annual update of changing patterns in residential services would not be possible. Because this report is part of a series, this edition draws heavily on methods, formats, and analyses developed in earlier reports. A number of individuals have contributed significantly to the development of this statistical program. Richard Walker established most of the basic procedures and data elements for the consolidated state reporting system used in this series some 20 years ago while on the staff of what is now the Administration on Developmental Disabilities. Gorden Krantz refined these and directed the first few surveys in the series with the assistance of Jane Clumpner. Their work was later carried on by Lisa Rotegard. The efforts of all these people have contributed much to developing and sustaining this series of reports. Cheryl Morgan provided editorial assistance in developing this manuscript and prepared the text, tables and figures for printing.

## EXECUTIVE SUMMARY

This report presents basic descriptive statistics on persons with mental retardation and related conditions in state-operated residential facilities in Fiscal Year 1990. It also reports comparative longitudinal statistics gathered since 1950 and includes a national directory of state-operated facilities for persons with mental retardation and related conditions. Key findings on the status and changing patterns of state-operated residential facilities include the following:

- The total number of state-operated residential facilities for persons with mental retardation and related conditions serving 15 or fewer residents (small PRF/MR) increased by 34 facilities (4%) between June 30, 1989 and June 30, 1990.
- The total number of state-operated residential facilities for persons with mental retardation and related conditions serving 16 or more residents (large PRF/MR) decreased by 3 facilities (1%) between June 30, 1989 and June 30, 1990.
- The total number of state-operated residential facilities not primarily for, but serving some residents with, mental retardation and related conditions (PRF/Other) decreased by 15 facilities (12%) between June 30, 1989 and June 30, 1990.
- Of the 1321 state-operated residential facilities serving persons with mental retardation and related conditions on June 30, 1990, 928 (70%) were small PRF/MR, 285 (22%) were large PRF/MR and 108 (8%) were PRF/Other.
- Of the 91,640 persons with mental retardation and related conditions in state-operated residential facilities on June 30, 1990, 7,120 (8%) were in small PRF/MR, 83,087 (91%) were in large PRF/MR and 1,433 (1%) were in PRF/Other.
- During Fiscal Year 1990, the average daily population of persons with mental retardation and related conditions in state-operated residential facilities was 92,729, a decline of 3,442 (3.6%) from Fiscal Year 1989.
- During Fiscal Year 1990 the average daily population of persons with mental retardation and related conditions in small PRF/MR was 6,510, an increase of 635 (11%) from Fiscal Year 1989.
- During Fiscal Year 1990 the average daily population of persons with mental retardation and related conditions in large PRF/MR was 84,732, a decrease of 3,959 (4.5%) from Fiscal year 1989.
- During Fiscal Year 1990 the average daily population of persons with mental retardation and related conditions in PRF/Other was 1,487, a decrease of 118 (7%) from Fiscal Year 1989.
- During Fiscal Year 1990 the average daily population of persons with mental retardation and related conditions in large PRF/MR and PRF/Other was 86,219, its lowest level since 1934.
- During Fiscal Year 1990 the average daily population of persons with mental retardation and related conditions in large PRF/MR and PRF/Other decreased by 4,077 (4.5%), a more rapid rate of decline than in either Fiscal Year 1989 (3.4%) or 1988 (4.1%).
- Between Fiscal Year 1967 and Fiscal Year 1990, the average daily population of persons with mental retardation and related conditions in large PRF/MR and PRF/Other declined by about 62.3%, from 228,500 to 86,219.

- Between Fiscal Year 1967 and Fiscal Year 1990, the average daily population of persons with mental retardation and related conditions in large PRF/MR decreased by 56.5%, from 194,650 to 84,732.
- Between Fiscal Year 1967 and Fiscal Year 1990, the average daily population of persons with mental retardation and related conditions in PRF/Other decreased by almost 95.6%, from 33,850 to 1,487.
- Between Fiscal Year 1967 and Fiscal Year 1990, the "placement rates" (average daily population of persons with mental retardation and related conditions per 100,000 of the general population) declined in large PRF/MR from 98.58 to 34.07 and in PRF/Other from 17.14 to 0.58.
- The Fiscal Year 1990 placement rates in large PRF/MR varied among all states from 7.8 (NH) to 80.8 (WY) and, among the 15 states operating small PRF/MR, placement rates for those facilities varied from 0.2 (MD) to 21.5 (NY).
- Admissions (First admissions and readmissions) to large PRF/MR in Fiscal Year 1990 decreased from Fiscal Year 1989 by 303 (5.7%).
- Discharges from large PRF/MR in Fiscal Year 1990 increased from Fiscal Year 1989 by 755 (12.3%).
- Deaths of persons with mental retardation and related conditions in large PRF/MR in Fiscal Year 1990 numbered 1,207, 1.45% of the end-of-year population of large PRF/MR and near the 1.43% average of the preceding four years.
- The average daily cost of care of a person with mental retardation and related conditions in large PRF/MR in Fiscal Year 1990 was \$196.33, an increase of 6.6% from the \$184.11 per diem of Fiscal Year 1989.
- The average annual cost of care of a person with mental retardation and related conditions in large PRF/MR in Fiscal Year 1990 (\$71,660), adjusted for changes in the Consumer Price Index, was 18 times the cost in 1950 (\$750).
- During Fiscal Year 1990 changes in individual states in the number of small PRF/MR were modest, with the exceptions of Connecticut which increased its small PRF/MR from 70 to 97 (38.6%), New Hampshire which became the 15th state operating small PRF/MR by opening 4, and Massachusetts which increased the number of its small PRF/MR from 38 to 46 (21.1%).
- During Fiscal Year 1990 the number of large PRF/MR stayed relatively stable, remaining unchanged in 39 states, increasing slightly in 6 states (AZ, CT, D.C., FL, NJ, OH) and decreasing slightly in 6 states (MD, MI, MO, NY, RI, TX).
- At the end of Fiscal Year 1990, every state operated one or more large PRF/MR and 23 states served persons in PRF/Other as well but only 15 states operated any small PRF/MR, 87.1% of which were concentrated in 5 states (CT, MA, MS, NY and TX).
- In Fiscal Year 1990, the overall picture of state-operated residential facilities for persons with mental retardation and related conditions was of a system serving some 92% of its declining population in large congregate care settings (large PRF/MR and PRF/Other) at costs rising above inflation.

## INTRODUCTION

This is the Ninth publication since Fiscal Year 1978, in a series of Center for Residential Services and Community Living, University of Minnesota reports providing statistics on persons with mental retardation and related conditions in state-operated residential facilities in the United States. Part 1 of this report presents facility, population and cost statistics for Fiscal Year 1990 that were compiled within state agencies. The data collection in Part 1 represents a somewhat expanded continuation of a statistical program originated in the Office of Mental Retardation Coordination (now the Administration on Developmental Disabilities) in 1968. The current survey has been expanded over the years to include population and cost statistics on "small" state-operated mental retardation facilities (those with 15 or fewer residents) and facilities designated primarily for populations other than persons with mental retardation and related conditions, as well as the larger state mental retardation facilities. The addition of "other" state-operated facilities was begun for Fiscal Year 1978, and the small state-operated facilities were added in Fiscal Year 1986.

Part 2 of this report places Fiscal Year 1990 statistics described in Part 1 within the longitudinal context of data gathered on state institution populations, resident movement, and costs of care since 1950. A brief historical review of these and other preceding surveys since 1950 can be found in Lakin, Hill, Street, and Bruininks (1986). For a more detailed review, including surveys and statistics since 1880, see Lakin (1979). Part 3 includes a directory of public residential institutions (16 or more residents) for people with mental retardation/developmental disabilities (MR/DD). This directory was prepared from a survey asking states to list facilities operating on December 31, 1990, those closed since 1960, and those projected to close by 1995.

As noted, this report distinguishes among facilities by size, notably those with 15 or fewer residents (1-15) and those with 16 or more residents (16+). It also distinguishes between two general classes of state-operated facility:

Public Residential Facilities/Mental Retardation (PRF/MR) are state-operated (public, in a slightly restricted sense) residential facilities managed and operated by state employees, which as a whole or as distinct administrative units are designated to be primarily or exclusively for persons with mental retardation and related conditions.

**Other Public Residential Facilities (PRF/Other)** are state-operated (public) residential facilities managed and operated by state employees, which as a whole are designated primarily for persons with disabilities other than mental retardation (in the vast majority of cases, psychiatric facilities), but in which reside one or more persons with a primary diagnosis of mental retardation or a formal dual diagnosis including mental retardation who are not in distinct administrative units for persons with mental retardation.

For the purposes of this report, persons with "mental retardation" are those who have been so designated by their respective state governments as part of the process of placing them in the state residential care system. The formal and currently accepted definition of mental retardation is "significant subaverage general intellectual functioning (generally an I.Q. of 69 or below) existing concurrently with deficits in adaptive behavior, and manifested during the developmental period" (Grossman, 1977, p. 11). "Related conditions" refers to conditions closely associated with mental retardation that cause or significantly contribute to "substantial functional limitations" in areas specified in the federal definition of developmental disabilities.

Persons designated as multiply handicapped (e.g., mentally retarded/mentally ill) living in "PRF/Other" present some states with reporting problems, though the problems have become considerably fewer as procedures and data management have improved and the "PRF/Other" population of persons with mental retardation has decreased. Nevertheless, the actual number of persons residing in PRF/Other who have mental retardation may be slightly higher than the number reported in some states.

**PART 1: PERSONS WITH MENTAL RETARDATION AND RELATED CONDITIONS  
IN STATE-OPERATED RESIDENTIAL FACILITIES: YEAR ENDING JUNE 30, 1990**

**Methodology**

The survey questionnaire for State-Operated Residential Facilities, Fiscal Year 1990, was mailed with a cover letter to each state's mental retardation/developmental disabilities program director or the state's designated "data supplier" on January 31, 1991. The questionnaire on state-operated facilities was Part 1 of a three-part survey which also included sections on nonstate facilities and ICF-MR certified facilities. Telephone follow-up began two weeks later to determine which individual(s) within each state agency had been given responsibility for compiling the requested statistics and to answer questions about the data requested. Additional mailings to 29 states were necessary.

Additional follow-up telephone calls to promote initial response and to clarify and edit the statistics on returned questionnaires continued until December 1991, when summaries of the data from the state questionnaires were sent to all states for verification. Corrections and special notes on state data were completed by February 1992. Compiling statistics from states on the three-part survey took an average of five telephone conversations generally involving one to four different people in each state. In eight states contacts were made with both mental retardation and mental health agencies to gather the required statistics for public residential facilities for persons with mental retardation or related conditions (PRF/MR) and public residential facilities for persons with other primary conditions--almost exclusively psychiatric institutions (PRF/Other). New data collection systems and agency staff reductions in several states resulted in some delay in reporting the requested statistics for Fiscal Year 1990.

Response rates for each of the items on the questionnaire are shown in Table 1.1. For PRF/MR, item response rates ranged from 82% to 100% of states reporting, with generally higher rates for statistics on the larger traditional institutions than for the facilities with 15 or fewer residents. Item response rates for PRF/Other ranged from 80% to 100%. Data elements of the state agency survey covered the number of facilities and residents, resident movement, and the costs of care.

**Table 1.1**  
**Percent of States Responding to Survey Items on State-Operated Facilities**  
**by Facility Type, Fiscal Year 1990**

<u>Survey Items</u>	<u>% of PRF/MR</u>		<u>% of PRF/Other</u>
	<u>1-15 res.</u>	<u>16+ res.</u>	
1. Number of Facilities	100	100	100

7. Live Releases During Year	86	92	82
8. Deaths During Year	92	94	82
9. Per Diem Cost	90	100	96

In recent years every state has increased efforts to place residents of large state facilities into smaller, community-based residential settings. To assist in the effort several states have established state-operated group homes and/or semi-independent living arrangements. For the fifth year, in addition to collecting data on state institution and state hospital populations, this survey also collected data from each state on residents of state-operated facilities with 15 or fewer residents, frequently referred to as "small" in this report. A further breakdown of data on small facilities into sizes 1-6 and 7-15 was requested, and all states provided these data on the number of facilities and residents.

Limitations are encountered when gathering statistics at the state level. Most notable among these are the variations in the types of statistics maintained by the various states and the specific operational definitions governing certain data elements. For example, several states indicated that they were unable to provide data on first admissions, readmissions, and releases according to the specific survey definitions, while in others, transfers between state-operated facilities, and respite care placements could not be separated from other movement as the survey instructions requested. General problems in the collection of the data are presented in the discussion accompanying each table in the body of the report. Specific state idiosyncrasies are reported in the *State Notes* in Appendix A. Although these variations are noted, it is not likely that they have a substantial effect on national or state totals or on the longitudinal trends presented in this report.

### **Findings and Discussion**

The following eleven tables and accompanying discussion summarize the statistics reported on state-operated residential facilities for the year ending June 30, 1990. The report is organized so that the discussion and accompanying tables are presented side by side. Definitions for each data element as well as the variations and problems in definitions as employed in the various states are noted in the discussion. Each table is also accompanied by a short summary of highlights of the state and national statistics presented.

In the discussion of these statistics, the descriptor "small" and the abbreviation "1-15 res." are used for state-operated facilities with 15 or fewer residents. Data on these small facilities are further broken down into facilities of 1-6 residents and 7-15 residents in most of the tables presented. The descriptor "large" and the abbreviation "16+ res." are used in this report for state-operated facilities with 16 or more residents. No distinction is made for "large" or "small" PRF/Other, as all are assumed to be large, that is to have 16 or more residents.

In the tables of this report a common set of symbols is used for estimated or unavailable statistics. These symbols are:

- DNF** "Data Not Furnished" is used where states were unable to report the specific type of data requested. It is assumed that this number is larger than zero, but it is unknown.
- e** "Estimated" data have been provided where exact statistics were not available. It is assumed that these state estimates represent the best available information under existing circumstances.
- N/A** "Not Applicable" is used where no data are reported in a particular cell of the table because a specific category of facility is not used in a state. It is the equivalent of "0," and is used only where the value "0" would have distorted averaged statistics.

*Number of State-Operated Residential Facilities*

Table 1.2 presents statistics by state on the number of state-operated residential facilities serving persons with mental retardation and related conditions in the United States on June 30, 1990. Separate counts are provided for facilities serving persons with mental retardation and related conditions in PRF/MR with 15 or fewer residents (1-15), further summarized by sizes 1-6 residents and 7-15 residents; PRF/MR with 16 or more residents; PRF/Other; and total state-operated facilities.

On June 30, 1990, states reported a total of 1,321 state-operated residential facilities serving persons with mental retardation and related conditions. Of these 1,213 were PRF/MR and 108 were PRF/Other. Of the 1,213 PRF/MR, 928 had 15 or fewer residents; 285 had 16 or more residents. All states operated at least one large PRF/MR on June 30, 1990 (New Hampshire has subsequently closed its PRF/MR); 15 states operated at least one small PRF/MR. Twenty-three states reported at least one PRF/Other housing persons with mental retardation in units not specifically for persons with mental retardation and related conditions. The total of 928 small state-operated facilities on June 30, 1990, represented an increase of about 4% (34 facilities) between June 30, 1989 and June 30, 1990. It is projected that the development of small state-operated residential programs will continue, at least for the near future (see Lakin, Jaskulski, Hill, Brvininks, Menke, White, & Wright, 1989). The greatest number of small PRF/MR were operated by New York (522 facilities) and Texas (82 facilities), which together had 65% of all small state-operated facilities on June 30, 1990.

The number of large state-operated facilities has remained relatively stable during the past several years. However, between June 30, 1989 and June 30, 1990 the reported number of large PRF/MR decreased by three and the reported number of PRF/Other decreased by 15. Maryland, Michigan, Missouri, New York, Rhode Island and Texas reported fewer large PRF/MR than in Fiscal Year 1989. Increases of one or two large PRF/MR were reported by 6 states as a result of reclassification of previously operating PRF/Other with distinct mental retardation units into the PRF/MR category.

*Average Daily Population of Persons With Mental Retardation and  
Related Conditions in State-Operated Residential Facilities*

Table 1.3 presents the average daily population of persons with mental retardation and related conditions living in large and small PRF/MR and PRF/Other in Fiscal Year 1990. During FY 1990 states had an average daily population of 92,729 persons with mental retardation and related conditions in all state-operated residential facilities. This included 6,510 in small PRF/MR, 84,732 in large PRF/MR, and 1,487 in PRF/Other categories. In FY 1989 the average daily population of people with mental retardation and related conditions in all state facilities was 96,171, including 88,691 residents of large PRF/MR, 1,605 residents of PRF/Other and 5,875 residents in small PRF/MR. During Fiscal Year 1990 the average daily population of persons with mental retardation and related conditions in large state-operated facilities (both PRF/MR and PRF/Other) decreased by 4,077 persons (or about 4.5%). During the same period the average daily population of persons with mental retardation and related conditions in small PRF/MR increased by 635 (10.8%). Thirty-six states did not directly operate small residential programs, although large numbers of smaller private facilities in these states are operated with state funding and general state oversight.

As has been the case each year for more than 20 years, there was a decrease in average daily population of persons with mental retardation and related conditions in large state-operated facilities between Fiscal Year 1989 and Fiscal Year 1990, with the rate of decrease (4.5%) somewhat greater than in recent years (e.g., 4.1% in FY 88 and 3.4% in FY 89). Decreases were again evident in most states, although 10 states reported the same or slightly increased total populations in large PRF/MR and PRF/Other combined. The largest increase in population of large PRF/MR and PRF/Other combined was 31 residents (California). Over one third (32,167) of the total U.S. daily average number of persons in state-operated facilities in this study resided in the states of California, New Jersey, New York, and Texas. In addition to having 59.5% of small PRF/MR residents, New York had 9.3% of all residents of large PRF/MR and PRF/Other residential programs.

***Average Daily Population of Persons With Mental Retardation and Related Conditions  
in State-Operated Residential Facilities per 100,000 of the General Population***

Table 1.4 presents the average daily population of persons with mental retardation and related conditions in state-operated residential facilities for Fiscal Year 1990 per 100,000 of state and national populations on July 1, 1990. This statistic is referred to here as the "placement rate."

For Fiscal Year 1990 the national placement rate for all state-operated facilities was 37.3 compared to 38.8 one year earlier. Decrease in national placement rate for all state-operated facilities was due primarily to the decrease in the national placement rate for large PRF/MR (from 35.7 in 1989 to 34.1 in 1990). During the same period the national placement rate for small PRF/MR increased from 2.4 to 2.6.

The national decrease in placement rate between Fiscal Years 1989 and 1990 in large state-operated facilities was evident in most states. Small increases in the placement rate occurred in Alabama, Illinois, Kentucky, Mississippi, and North Dakota. An apparent 10.3% increase in the placement rate in the District of Columbia was due to inclusion of a facility for which data was not available for Fiscal Year 1989. Rates in Alaska, Arizona, California, Georgia, Maine, Missouri, Montana, Nebraska, New Mexico, North Carolina, Tennessee, and Vermont remained essentially the same. New York showed the largest decrease in large facility placement rate (from 51.7 in 1989 to 44.4 in 1990) Other states that experienced a decrease of 5 or more per 100,000 population were Oregon, Rhode Island, and Wyoming.

The highest placement rate in large state facilities for Fiscal Year 1990 was in Wyoming (80.8) Other states showing placement rates in large state facilities of 60 or more per 100,000 were Louisiana (62.1), South Carolina (65.6) and New Jersey (68.0). The states with the lowest placement in large state-operated facilities in 1990 were Alaska, Arizona, Colorado, Florida, Hawaii, Kentucky, Michigan, Nevada, New Hampshire, and West Virginia, all below 20 per 100,000. New Hampshire had the lowest large PRF placement rate (7.8 in Fiscal Year 1990) and has subsequently closed its PRF to persons with mental retardation and related conditions. The highest placement rates in small state-operated facilities were in New York (21.5) and Rhode Island (18.2). The highest placement rate in state-operated facilities of 6 or fewer residents was in Rhode Island (7.6).

*Persons With Mental Retardation and Related Conditions in  
State-Operated Facilities at the Beginning and End of the Year*

Tables 1.5, 1.6 and 1.7 present statistics on the number of persons with mental retardation and related conditions living in state-operated facilities on the first and last days of Fiscal Year 1990. Table 1.5 presents statistics on the number of persons with mental retardation and related conditions in small PRF/MR (15 or fewer residents), large PRF/MR (16 or more residents), and PRF/Other on July 1, 1989 (the first day of Fiscal Year 1990). The small facilities are further classified into 1-6 residents and 7-15 residents. Table 1.6 presents the same statistics for the same categories of state-operated facilities on June 30, 1990 (the last day of Fiscal Year 1990). Table 1.7 presents statistics on the net change in the number of residents with mental retardation and related conditions in large and small PRF/MR and in PRF/Other from July 1, 1989 to June 30, 1990.

As shown most clearly in Table 1.7, the tendency for states to reduce the number of persons with mental retardation and related conditions living in large PRF/MR and PRF/Other continued during Fiscal Year 1990. Overall, nationally there was a decrease of 4.8% in the population of large state-operated facilities from the beginning to the end of Fiscal Year 1990. Arizona (2.5%), Florida (1.1%), Mississippi (1.4%), Nebraska (0.6%), Nevada (6.0%), New Jersey (0.6%) and Virginia (0.8%) showed increases in large state facility populations over that period; no change was reported by Alabama, Alaska, and Texas.

Nine states reported a net reduction of more than 10% in the number of persons with mental retardation and related conditions in their large state-operated facilities between July 1, 1989 and June 30, 1990. The largest percentage decreases were in New Hampshire (57.5%), District of Columbia (25.1%), West Virginia (22.4%), and Wyoming (21.4%). The reported number of residents in small PRF/MR increased by 21.4% during Fiscal Year 1990 due, in great part, to increases of 1051 residents in New York and 148 in Connecticut. The number of PRF/Other residents with mental retardation was indicated to have declined about 12% nationally during the year, but some of this change can be attributed to the reclassification of some PRF/Other to PRF/MR, as distinct units for persons with mental retardation were established in facilities that were formerly in the PRF/Other classification.

*First Admissions of Persons With Mental Retardation  
and Related Conditions to State-Operated Residential Facilities*

Table 1.8 reports first admissions to state-operated residential facilities in Fiscal Year 1990. In this survey first admissions were defined as persons who had never previously resided in any state-operated residential facility. However, in a few states this specific statistic was not available, and persons reported as "first admissions" were persons who were new to a particular facility to which they had been admitted. Some of these individuals may have previously resided in another state facility, resulting in slight inflation of those states' "first admission" totals. For FY 1990 four states were unable to furnish first admission data on large PRF/MR; ten were unable to provide those data for PRF/Other; seven (including New York and Texas) were unable to provide those data for small PRF/MR.

In Fiscal Year 1990 reporting states indicated a total of 3,085 first admissions to large PRF/MR. Estimations of first admissions to PRF/MR in the four nonreported states, based on the ratio of first admissions to average daily population in states reporting first admissions, produced a national estimate of 3,248 first admissions in FY 1990, or 3.8% of the average daily population of those facilities. Reporting states indicated 429 first admissions to PRF/Other. Again, estimates for states unable to report first admissions to PRF/Other were produced based on the average first admission rate of reporting states. This yielded a national estimate of 596 first admissions to PRF/Other. Therefore, there were an estimated 3,844 first admissions to large state institutions in FY 1990, or 4.5% of the average daily population during Fiscal Year 1990. About 15.5% of estimated first admissions were to PRF/Other. This is notable considering that only about 1.7% of the total average daily residents lived in PRF/Other. The large proportion of first admissions to PRF/Other is counterbalanced by similarly high total releases from such facilities (see Table 1.10). Obviously PRF/Other tend to provide relatively short-term placements for persons with mental retardation, presumably related in most cases to behavioral treatment, crisis intervention, and/or evaluation and assessment. Arizona, Vermont, Washington and Wyoming reported no first admissions to large PRF/MR in Fiscal Year 1990, and Alaska, Delaware, Hawaii, and New Hampshire each reported first admission rates of only 3% or less of the average daily population.

*Readmissions of Persons With Mental Retardation  
and Related Conditions to State-Operated Residential Facilities*

Table 1.9 summarizes statistics on readmissions to state-operated residential facilities in Fiscal Year 1990. In this survey readmissions were defined as persons who had at least once before been a resident of a state-operated residential facility. However, in a few states this specific statistic was not available, and persons reported as "readmissions" included only people who had previously resided in the specific facility to which they were once again admitted during the year. In those states the number of "readmissions" may be somewhat deflated. Statistics on readmissions were not available on large PRF/MR in nine states, on small PRF/MR in seven states (including New York and Texas), and on PRF/Other in ten states. In a few instances this was because first admissions and readmissions are not distinguished in the state data systems.

In Fiscal Year 1990 forty-two states reported 1,477 readmissions to large PRF/MR and 13 states reported a total of 557 readmissions of persons with mental retardation to PRF/Other. Using the average readmission rate of reporting states, the total estimated readmissions to PRF/MR in FY 1990 would be 1,786, or 2.1% of the average daily population during Fiscal Year 1990 of those facilities, and the national total of readmissions to PRF/Other would be 774 (52%). Therefore, there was an estimated total of 2,560 readmissions to large PRF/MR and PRF/Other in FY 1990 representing 3.0% of the average daily population during Fiscal Year 1990. About 30% of estimated readmissions in FY 1990 were to PRF/Other, even though PRF/Other housed only about 1.7% of the average daily population. As noted in the discussion of first admissions, these facilities show high activity in all resident movement categories, indicating short-term residential placements, including behavioral treatment, crisis intervention, and/or evaluation functions.

In 1990 seven states (Alaska, Delaware, New Mexico, North Dakota, Ohio, Rhode Island and Vermont) reported no readmissions to large PRF/MR. Ten states reported 10 or fewer. The highest reported total was 426 in New York, 23.9% of the national estimated total, and about 5.5% of New York's average daily population in large PRF/MR. Other states with reported readmissions of 5.5% or more of average daily population include Hawaii (6.2%), Iowa (5.6%), Maine (35.7%), Maryland (7.2%), and Nevada (10.7%).

*Releases of Persons With Mental Retardation  
and Related Conditions From State-Operated Residential Facilities*

Table 1.10 summarizes statistics reported by the states on residents released from state-operated residential facilities in Fiscal Year 1990. For the purposes of this study releases were defined as persons with mental retardation and related conditions who were officially released from state-operated facilities and removed from the rolls during the year. Four states were unable to provide the number of releases from large PRF/MR, nine states were unable to report releases of persons with mental retardation from PRF/Other, and seven states were unable to report releases from small PRF/MR.

States reported a total of 6,531 releases from large PRF/MR and 1,089 from PRF/Other for FY 1990. Estimations of releases from PRF/MR in the four nonreporting states based on the release rate of all reporting states produced a total national estimate of 6,877 releases from large PRF/MR in 1990. Similar estimates of PRF/Other releases in nonreporting states yielded a total national estimate of 1,396 releases from PRF/Other in FY 1990. Thus, an estimated 8,273 persons were released from large state facilities for an annual rate of 9.6% of the average daily population during Fiscal Year 1990. The release rate (ratio of releases to average daily population) for large state facilities in 1990 (1:10.4) was higher than the 1989 rate (1:12.1). Release rates for PRF/MR (1:12.3) were much smaller than those of PRF/Other (1:1.1). PRF/Other reported 16.9% of all releases from large state facilities even though PRF/Other residents made up only 1.7% of the population of all state-operated facilities.

In Fiscal Year 1990 states varied substantially in the total number and rates of released residents from their large state-operated facilities. Of states reporting releases from large PRF/MR Alaska, Arizona, Delaware, Nebraska and Vermont reported 5 or fewer releases, while California, Massachusetts, New York, and Texas each reported over 400. The greatest number of releases from all large state-operated residential facilities serving persons with mental retardation and related conditions in 1990 were reported by New York (1081) and Texas (1024). However, relative to each state's average daily population, Hawaii, Iowa, Maryland, Nevada, North Dakota, and Oregon were most active in releasing residents of large state facilities with at least 1 release during the year for every 4 persons in the average daily population.

*Deaths of Persons With Mental Retardation  
and Related Conditions in State-Operated Residential Facilities*

Table 1.11 summarizes statistics reported by the states on the number of persons with mental retardation and related conditions who died while on the rolls of state-operated residential facilities in Fiscal Year 1990. Caution must be exercised in comparing or interpreting death rates across states. Residents with life threatening conditions are sometimes transferred to medical hospitals or skilled nursing homes, particularly when acute medical services are not available in a state-operated facility. State facility residents who die in a hospital or skilled nursing facility may or may not still be considered to be on the rolls of the state-operated facility when they die. Caution is also required in making interstate comparisons of deaths among state facility populations because states vary not only in the administrative status of persons transferred to medical facilities, but also in the age and disability profiles of the populations they serve in their state-operated facilities.

In Fiscal Year 1990, 1,072 deaths were reported in large PRF/MR by the 48 states providing this statistic. Of the 23 states having PRF/Other, a total of 28 deaths was reported by 14 states in their PRF/Other.

Estimating deaths in the three states unable to provide the statistics for large PRF/MR, based on the ratio of deaths to average daily residents in reporting states, yielded an estimated 1,207 deaths nationwide. Using the same method of estimation for states unable to report deaths of persons with mental retardation in PRF/Other, an estimate of 38 deaths nationally in PRF/Other was obtained. The estimated total of 1,245 deaths in large PRF/MR and PRF/Other and the national average of 1.4 deaths per 100 average daily residents of large state facilities was slightly higher than in Fiscal Year 1989 survey in which there were 1,205 deaths and 1.3 deaths per 100 of the average daily residents of large state facilities. Nationwide, PRF/MR averaged 1.4 deaths per 100 average daily residents in Fiscal Year 1990, while PRF/Other averaged 2.6 deaths per 100 average daily residents.

### *Cost of Care in State-Operated Residential Facilities*

Table 1.12 summarizes the costs of care for persons with mental retardation and related conditions residing in state-operated residential facilities. These costs are reported for individual states on an average per resident per day basis. The national averages presented are the average daily per resident costs reported by each state weighted by that state's average daily residential population. For Fiscal Year 1990 every state reported the average daily cost for large PRF/MR; twenty-one states reported that cost for PRF/Other. Ten states were able to provide a per resident per day cost statistic for their small PRF/MR.

Average cost of care in large PRF/MR varied considerably across the United States with a national average of \$196.33 per day. The highest cost of care in large PRF/MR reported for Fiscal Year 1990 was \$353.24 per day in Connecticut, followed in order by New York (\$352.03), Rhode Island (\$336.15) and Alaska (\$321.31). In all, 41% of the states (21) reported annual per resident costs in PRF/MR above the national average (\$196.33 per day or \$71,660.45 per year). Only Mississippi (\$82.00) reported per resident per day average costs below \$100 in their PRF/MR. From Fiscal Year 1989 to 1990 the per resident per day average cost of care in large PRF/MR increased 6.6% from \$184.11. The average annual increase since 1977 has been 11.1%.

The 23 states providing for persons with mental retardation in PRF/Other and reporting the costs of care in those facilities reported an average per resident cost of \$184.23, with a smaller reported increase from 1989 to 1990 (4%) than was reported for large PRF/MR. However, the reported PRF/Other costs are usually the per resident costs of the entire facility, not specifically the costs for residents with mental retardation, and since total PRF/Other populations have stabilized nationwide, per resident costs are not being driven up by the spreading of fixed institutional cost over fewer and fewer residents as is occurring in PRF/MR. National average cost of care reported by 10 states for small PRF/MR (representing 86.1% of the population of small facilities) was \$154.34 per resident per day or 78.6% of those reported for large PRF/MR residential programs.

**PART 2: LONGITUDINAL TRENDS IN LARGE STATE-OPERATED  
RESIDENTIAL FACILITIES, 1950-1990**

**Introduction**

Part 2 of this report presents a longitudinal view of changing patterns in the placement of persons with mental retardation and related conditions in large state-operated residential facilities from 1950 to 1990. Although in recent years states have begun to develop small (15 or fewer residents) state-operated facilities, the vast majority of persons in state-operated facilities remain in the large institutions. As the once overwhelmingly predominant model of residential care (large state facilities housed 90.4% of all persons with mental retardation in residential settings in 1967), few statistics serve as better broad indicators of the changing patterns of residential services for persons with mental retardation and related conditions than the changes taking place in the populations of large state institutions in the United States.

The longitudinal data presented here derive from several sources. Data for both PRF/MR and PRF/Other for the years 1950 to 1968 are from the National Institute of Mental Health's surveys of "Patients in Institutions." Data on state mental retardation facilities for Fiscal Years 1969 and 1970 come from surveys conducted by the Office on Mental Retardation Coordination, now the Administration on Developmental Disabilities. Data on state mental retardation facilities for 1971 through 1977 come from the surveys of National Association of Superintendents of Public Residential Facilities for the Mentally Retarded. Data on PRF/Other for 1969 to 1977 come from the National Institute of Mental Health's surveys of "Patients in State and County Mental Hospitals." Data on both PRF/MR and PRF/Other for the years 1978 through 1990 come from the National Recurring Data Set Project of the Center for Residential Services and Community Living, University of Minnesota. Data for 1990, the latest survey in this series, are presented in detail in Part 1 of this report. Appendix B provides notes on the specific uses of the data from these sources. The list of references and data sources includes specific citations for the surveys and statistical summaries used to complete the sets of longitudinal data on changing patterns in the utilization of state-operated residential facilities that are presented in the following pages. A detailed description of the methodologies used in these surveys, as well as those that preceded them, can be found in Lakin (1979).

#### Average Daily Population of Large State-Operated Mental Retardation Facilities

The gradual depopulation of state-operated (public) residential facilities for persons with mental retardation and related conditions (PRF/MR) has been apparent in national statistics since 1967. There has been a decreasing total residential population of state institutions for all types of mental disability (i.e., mental health and developmental disability) since 1956. Although the total population in state mental hospitals peaked in 1955, the number of persons with a primary diagnosis of mental retardation in state-operated facilities primarily for persons with mental illness (i.e., PRF/Other) continued to increase until 1961. In 1961, there were nearly 42,000 persons with a primary diagnosis of mental retardation in such facilities. The combined total of persons with mental retardation and related conditions in state-operated residential facilities (PRF/MR and PRF/Other) in 1961 was 209,114. By 1967 the number of persons with mental retardation in state hospitals for persons with mental illness had decreased to 33,850, but the total number of persons with mental retardation and related conditions in all state-operated residential facilities had increased to 228,500, 194,650 of whom were in state mental retardation institutions. This was the highest total ever.

Since 1967 the number of persons with mental retardation and related conditions in all state-operated residential facilities has decreased by about 62%. During this period the numbers of persons with mental retardation in PRF/Other decreased much more rapidly than did the number of persons with mental retardation in PRF/MR. The different rates of depopulation reflect a number of factors. For one, the overall rate of depopulation of state mental health facilities has been much more rapid than the rate of depopulation of state mental retardation facilities. Between 1965 and 1985 the total population of state mental health institutions decreased from about 475,000 to 114,000 residents (Zappolo, Lakin, & Hill, 1990). This rapid depopulation and frequent closing of facilities caused major reductions in residents with all types of mental disability, including mental retardation. Relatedly over the years, many PRF/Other became primarily dedicated to populations with mental retardation or developed independent PRF/MR units on the grounds of what were historically public psychiatric facilities.

A driving force in the reduction of residents with mental retardation in PRF/Other has been the general movement toward deinstitutionalization and specific concerns about the appropriateness of placement

in psychiatric facilities. However, extremely important, too was the Medicaid legislation in the late 1960s and early 1970s that allowed states to obtain federal cost-sharing of residential services to persons with mental retardation and related conditions in mental retardation facilities and in nursing homes. This legislation continued exclusion of institutions for "mental diseases" from participation in Medicaid, except for children and elderly residents. However, distinct units for persons with mental retardation and related conditions within those institutions could become ICF-MR certified. Many have and within the definitions employed in this study are classified as PRF/MR.

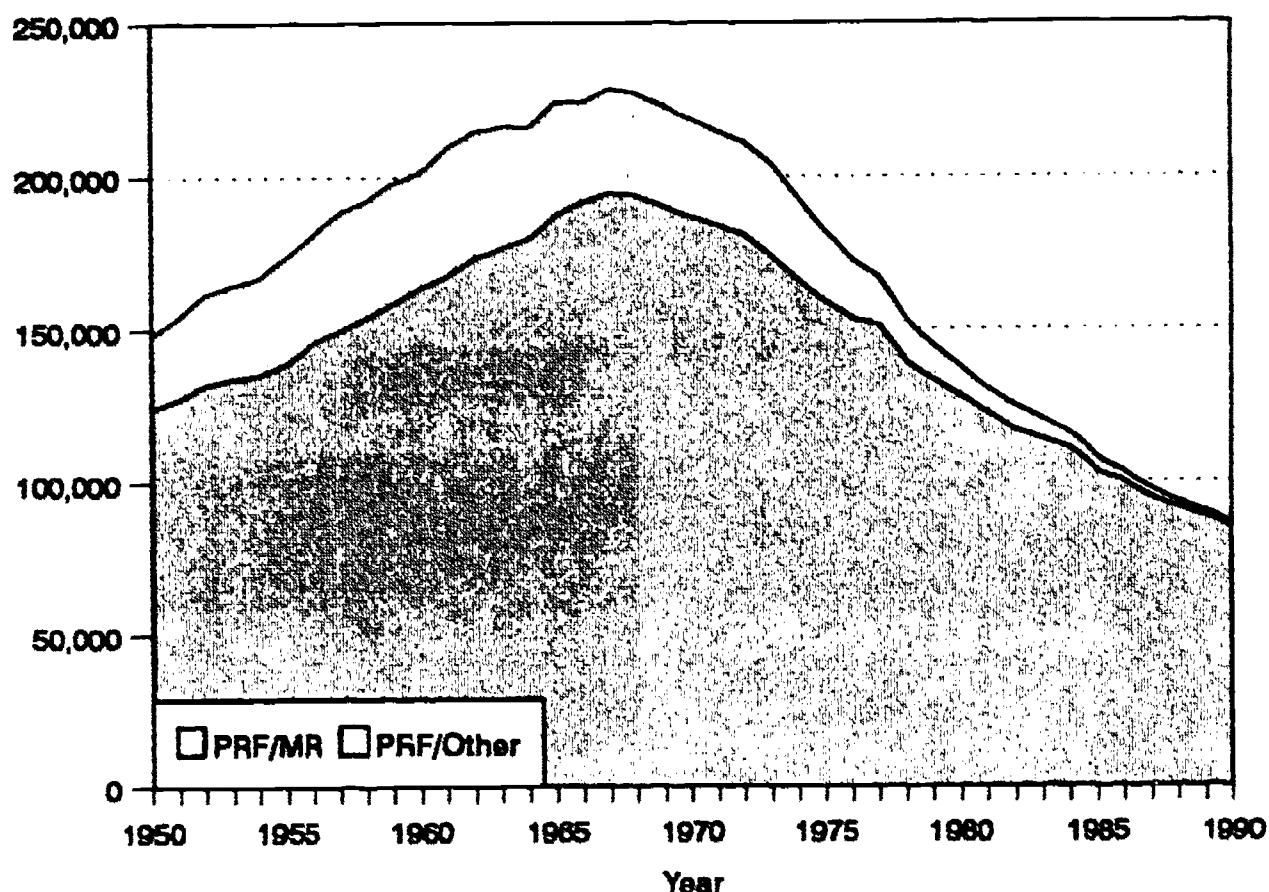

Figure 2.1 shows the relative contribution of PRF/MR and PRF/Other programs to the total average daily population of persons with mental retardation in large state-operated residential facilities. The average daily number of persons with mental retardation in large PRF/MR in FY 1990 (84,732) was only 43.5% of the average number in large PRF/MR in 1967. More impressively the average number of persons with mental retardation and related conditions in all large state institutions in FY 1990 (86,219) was just 37.7% of the average number in FY 1967 (228,500). The combined national total of people with mental retardation and related conditions in PRF/MR and PRF/Other in 1990 was the lowest total since 1933.

Selected Data Points for Figure 2.1: Average Daily Population of Large State-Operated Mental Retardation Facilities, 1950-1990

Year	PRF/MR	PRF/Other	Total
1950	124,304	23,905	148,209
1955	138,831	34,999	173,830
1960	163,730	37,641	201,371
1965	187,305	36,825	224,130
1967	194,650	33,850	228,500
1970	186,743	31,884	218,627
1973	173,775	30,237	204,012
1977	151,532	15,524	167,056
1980	128,058	9,405	137,463
1981	122,898	7,866	130,764
1982	117,160	7,865	125,026
1984	111,333	5,096	116,429
1985	103,629	4,536	108,165
1986	100,190	3,106	103,296
1987	94,696	2,837	97,533
1988	91,582	1,933	93,515
1989	88,691	1,605	90,296
1990	84,732	1,487	86,219

Note. Some PRF/Other data are estimated (see notes in Appendix B).

Figure 2.1  
Average Daily Population of Large State-Operated Mental Retardation Facilities, 1950-1990

Average Daily Population of Large State-Operated  
Mental Retardation Facilities per 100,000 of the General Population

Since 1967 there has been a substantial decrease in the number of people with mental retardation and related conditions in state-operated residential facilities. But as notable as has been the reduction in total residents, it appears even more substantial when indexed for the growing total population of the United States. Comparing the population of state-operated facilities to the general population of the U.S. permits a better picture of the relative use of state-operated facilities as residential placements for persons with mental retardation and related conditions. The average annual placement rates per 100,000 of the total U.S. population for PRF/MR and PRF/Other are shown in Figure 2.2.

The trends in the placement rates of persons with mental retardation and related conditions in all state-operated residential facilities are generally similar to trends for the total populations. However, the rate of change in the placement rate is substantially greater because the U.S. population has increased as the

population of state-operated facilities has decreased. Another notable difference between the two figures is in their peak years. While the total number of persons with mental retardation and related conditions residing in all state-operated residential facilities and the number residing in facilities primarily for persons with mental retardation peaked in 1967, the placement rate of persons with mental retardation in all state-operated facilities (PRF/MR and PRF/Other) peaked in 1965 at 115.8 per 100,000 of the general population. This compares with 34.7 in FY 1990. The highest placement rate in state-operated facilities primarily for persons with mental retardation was in 1967. That year's placement rate of 98.6 compares with the 1990 rate of 34.1. The 1990 placement rate for state-operated mental retardation facilities fell below the rate of 39.3 in 1922, when there were 66 PRF/MR operating in 40 states, and approached the rate of 30.0 in 1916, when there were only 40 PRF/MR operating in the United States, with 16 states not yet having one (Lakin, 1979).

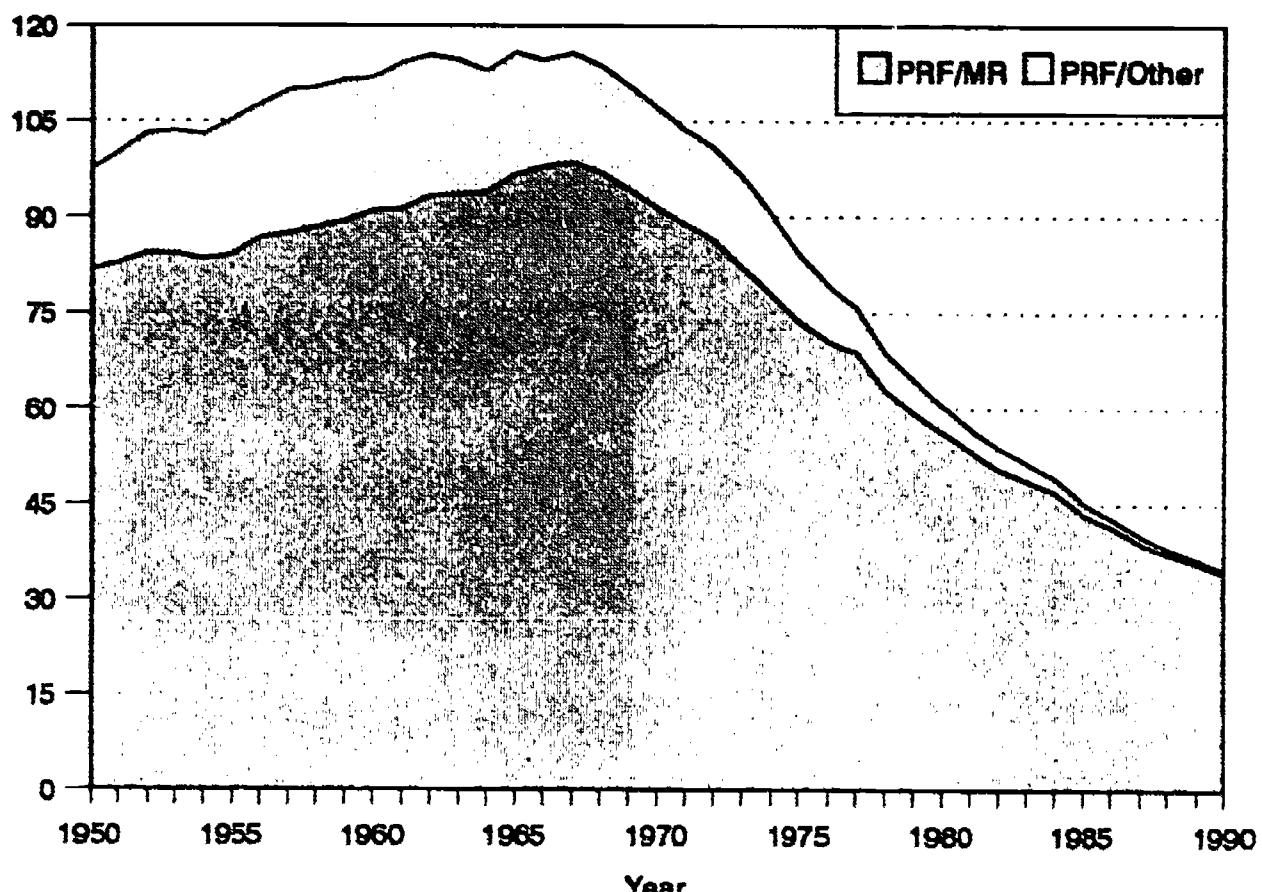

As noted earlier, some of the decrease in the placement rate in "PRF/Other" facilities between 1973 and 1990 may reflect changing definitions. During that period some facilities historically serving psychiatric populations either through official or operational designation became facilities primarily serving persons with mental retardation and related conditions. Others developed specific administratively distinct units of traditional psychiatric facilities for these purposes. The decrease shown between 1977 and 1980 was also to a minor extent affected by the inclusion in the PRF/Other totals of only those residents with mental retardation and related conditions in mental retardation units or in PRF/Other with 10 or more residents with mental retardation and related conditions. But most important in this trend were the major changes in philosophy and federal reimbursement of the costs of care that brought considerable disfavor to providing residential services to persons with mental retardation in psychiatric facilities. The statistics in Figure 2.2 show clearly a substantial decrease in the rate of placement of persons with mental retardation and related conditions in state-operated residential facilities. The placement rate in 1990 for large PRF/MR was only 34.6% of the 1967 placement rate. The placement rate for all large state-operated facilities (PRF/MR and PRF/Other) in 1990 was just 29.9% of the 1967 placement rate.

Selected Data Points for Figure 2.2: Average Daily Population of Large State-Operated Mental Retardation Facilities per 100,000 of the General Population, 1950-1990

Year	U.S. Population in 100,000s on 7/1	PRF/MR	PRF/Other	Total
1950	1,518.68	81.85	15.74	97.59

Figure 2.2  
Average Daily Population of Large State-Operated  
Mental Retardation Facilities per 100,000 of the General Population, 1950-1990

### Movement Patterns in Large State-Operated Mental Retardation Facilities

From the beginning of this century until the mid-1960s, resident movement statistics of state-operated residential facilities for persons with mental retardation were relatively stable. During that period first admissions and discharges both steadily increased, but state facility populations grew as first admissions substantially outnumbered discharges. During this same period readmissions remained relatively low because once placed, people tended to remain institutionalized. From 1903 to 1965 the annual number of deaths in state institutions increased substantially, but death rates (deaths per 1,000 average daily population) decreased steadily from 41.3 to 19.1.

By the mid-1960s these historical patterns began to change. In 1965 the number of first admissions to state-operated facilities began to decrease, dropping below the increasing number of discharges by 1968. The number of readmissions increased substantially throughout the 1970s as return to the institution was a frequently used solution to problems in community placements. Since 1980 readmissions have been reduced fairly steadily, but remain a substantial proportion of total admissions (35.3% 1990). Over this same period total first admissions and readmissions had remained fairly consistent between 2,000 and 3,000 fewer than the number of discharges. In Fiscal Years 1988 and 1989 the difference between admissions and discharges was less than 1,000, but it increased to 1,843 in FY 1990. Because of differences among states and various earlier surveys in defining and counting transfers, first admissions, and readmissions, all types of admissions have been combined for 1950 to 1990. These are reported as the data points for Figure 2.3.

In recent years, the number of discharges has fallen far below the numbers apparent in the first 12 years of PRF/MR depopulation. The period of the greatest number of discharges was the decade of the 1970s when discharges were consistently between 14,000, and 17,000 per year. In 1990 there were about 6,900 discharges. This was more than in FY 1988 and 1989, but fewer than the 8,000 in 1987 and 9,400 in 1986. Deinstitutionalization literally connotes a process of discharging people from institutions, but Figure 2.3 shows clearly that it has also encompassed important efforts to avoid initial institution placements. The resident movement patterns shown in Figure 2.3 indicate that this latter "preventative" policy (i.e., reducing admissions to state institutions) has actually accounted for relatively more of the reduction in state mental retardation

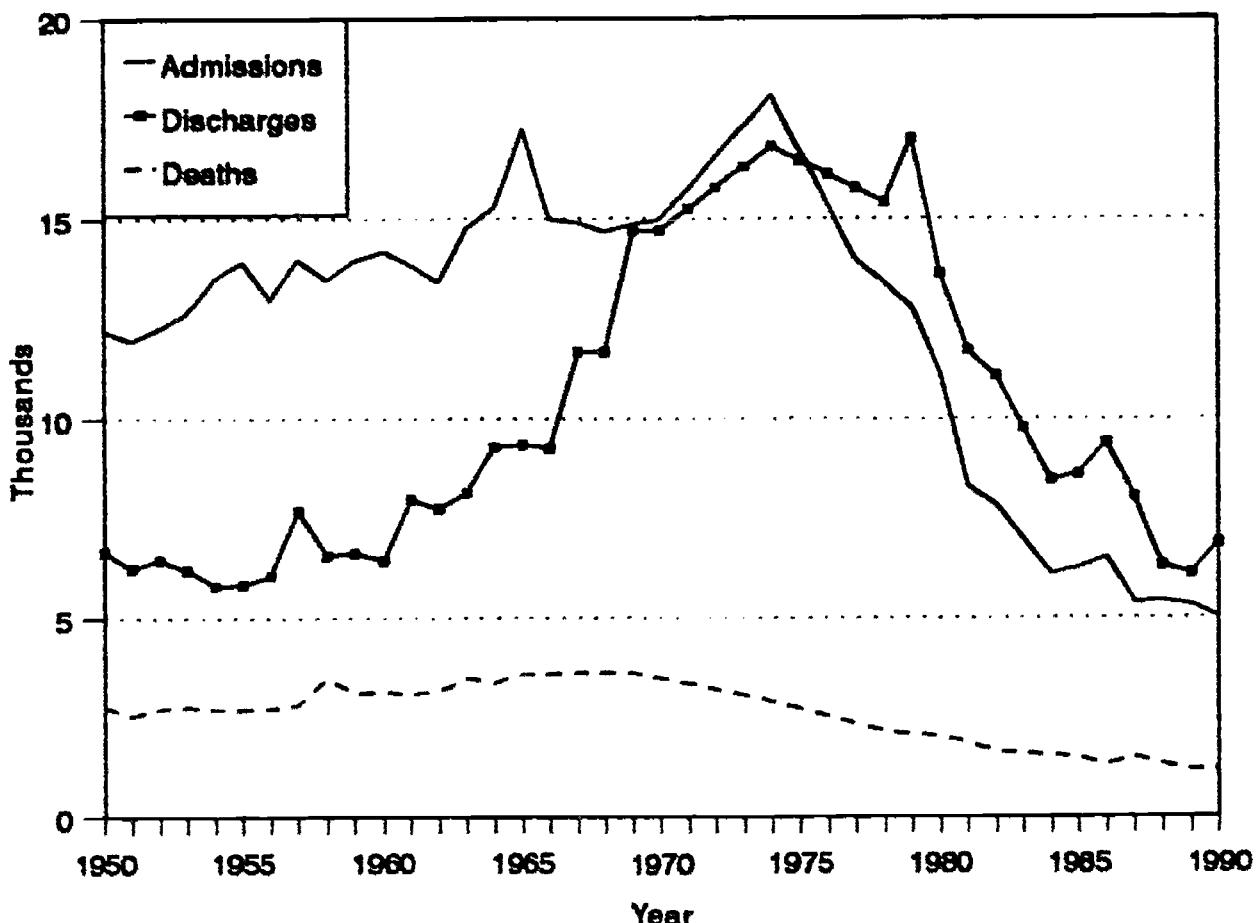

facility populations over the past decade than has the number of releases, although both clearly have been crucial to reducing PRF/MR populations.

In the period from 1979 to 1990 there were substantial decreases in both admissions to and discharges from state-operated facilities (from 12,802 to 5,034 and from 16,980 to 6,877 respectively). However, admission and discharge rates have been relatively stable in the last five years. While state institutions would appear from the statistics to be considerably less dynamic in terms of resident movement than in earlier years, it must be remembered that in 1990 these facilities had less than half their total populations of 1967. Total deaths reported for 1990 was similar to previous years. In 1990 the number of deaths as a percentage of residents at the end of the year was 1.45%. This compares with 1.32% in 1986, 1.59% in 1987, 1.45% in 1988 and 1.36% in 1989. Deaths as a percentage of residents at year's end have ranged between 1.3% and 1.6% in each of the years between 1978 and 1990.

Selected Data Points for Figure 2.3: Movement Patterns in Large State-Operated Mental Retardation Facilities, 1950-1990

Year	Admissions	Discharges	Deaths
1950	12,197	6,672	2,761
1955	13,906	5,845	2,698
1960	14,182	6,451	3,133
1965	17,225	9,358	3,585
1967	14,904	11,665	3,635

**Figure 2.3**  
**Movement Patterns in Large State-Operated Mental Retardation Facilities, 1950-1989**

**Annual Per Resident Costs for Care  
in Large State-Operated Mental Retardation Facilities**

The costs of care provided in state-operated residential facilities for people with mental retardation and related conditions have increased dramatically since 1950, when the annual cost of care for state-operated facility residents was about \$750.00. Forty years later the cost of care in state residential facilities was on the average \$71,660.00 per year. Even in dollars adjusted for changes in the Consumer Price Index over this period, costs of care in 1990 were 18 times as great as in 1950. Figure 2.4 shows the trends in residential care costs in both actual and adjusted dollars (\$1=1967) between 1950 and 1990. In terms of "real dollar" equivalents, the annual cost of care in state residential facilities for people with mental retardation increased from just over \$1,000 to \$18,340 over the 40 year period. That rate of increase represents an annual after inflation compounded growth of 10% per person per year. For Fiscal Year 1990 states reported a 1.35% real dollar increase in per resident costs over Fiscal Year 1989. However this followed an unusually large (13.94%)

increase between Fiscal Years 1988 and 1989. The two year 7.74% average annual increase in per resident costs was slightly less than the 8.11% average increase from 1980 to 1990.

A number of factors have contributed to the steady increases in the costs of residential care. One contributing factor has been the increasingly disabled population of persons served in state-operated facilities. For example, in 1940 about 65% of all residents of state-operated facilities for people with mental retardation had borderline, mild, or moderate retardation. In 1964, 40% of residents were so classified. By 1977, that proportion had decreased to 27% and in 1989, only about 17% of all residents were identified as having borderline, mild, or moderate retardation. Associated with these changes have been increased intensity and specialization of professional staff employed to serve remaining residents and the relatively lower reliance on residents with less severe disabilities in operating and maintaining facilities.

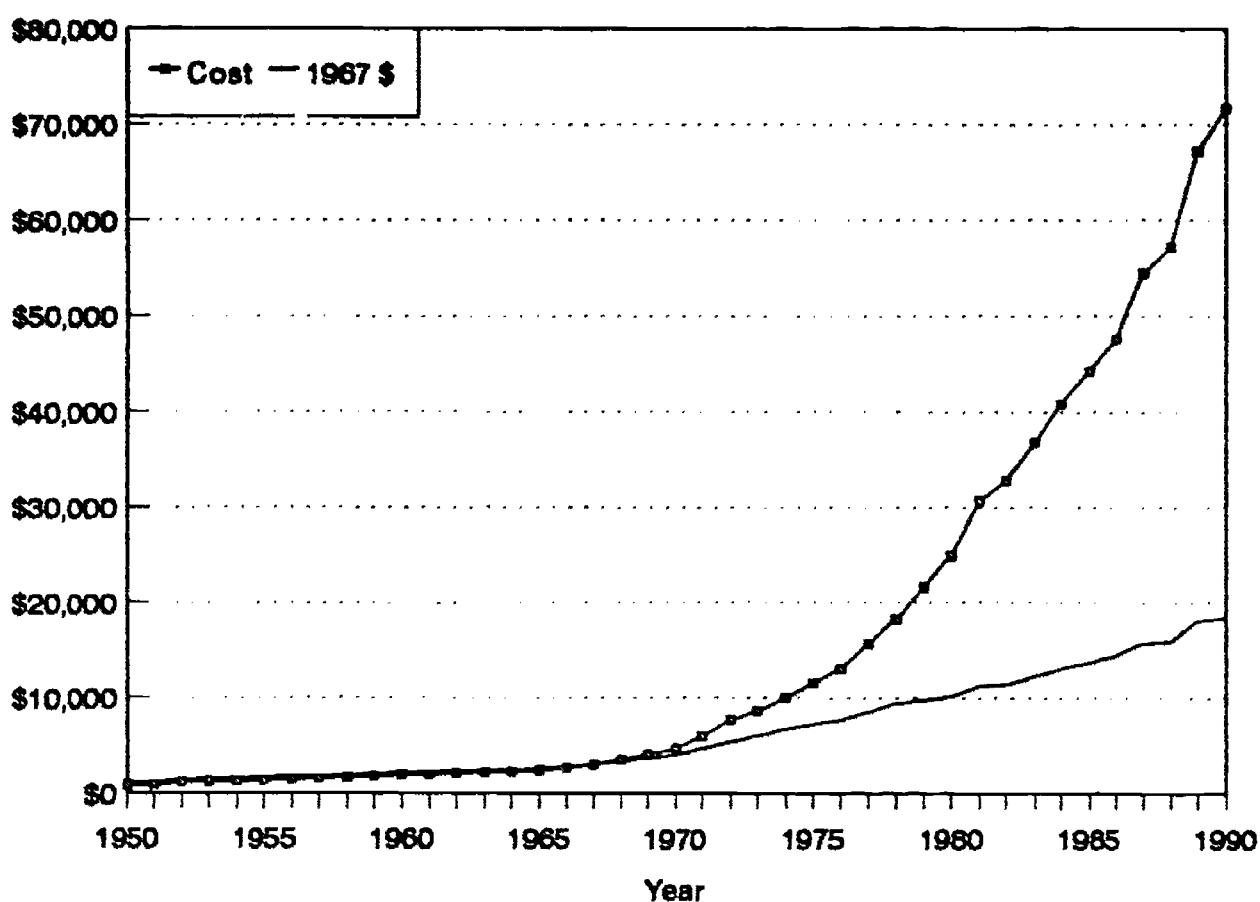

Other important contributions to increasing costs have come from legislative and judicial efforts to upgrade the quality of living and habilitation provided within public residential facilities. While the desire to improve care in state-operated facilities was evident in the 1950s and 1960s, two major factors began to exercise considerable upward pressure on the costs of care in the early 1970s. The first of these was the Intermediate Care Facility for the Mentally Retarded (ICF-MR) program enacted in 1971. This program currently offers Federal sharing through Medicaid of half to three-quarters of the costs of residential care depending on the per capita income in states, under the condition that facilities meet specific program, staffing, and physical plant standards. On June 30, 1990, 93% of all state institution residents lived in units with ICF-MR certification. The ICF-MR program has significantly cushioned the impact of rapidly increasing institution costs for the states. For example, in 1970, one year before enactment of the ICF-MR program, the average annual per resident cost of state institution care was about \$4,000. In 1990, with the average annual per resident cost in real dollars \$14,000 more, states' share of those increases was only about \$4,000 per resident per year. Court decisions and settlement agreements have also had significant impact on the costs of institutional living nationally with their frequent requirements of substantial effort by states to upgrade the quality of care, habilitation, and residential environments and further reductions of institutional populations. It is the decrease in institutional populations without either reductions in institution budgets (they had an

average annual real dollar increase of 1.8% between FY 1980 and FY 1990) or substantially reduced number of institutions that continues to drive the steady increase in per resident costs in state institutions in the United States.

Selected Data Points for Figure 2.4: Average Annual Per Resident Costs of Care in Large State-Operated Mental Retardation Facilities, 1950-1990

Year	Cost	Cost (\$1=1967)
1950	\$745.60	1,034.15
1955	1,285.50	1,603.02
1960	1,867.70	2,104.90
1965	2,361.08	2,498.02
1967	2,965.33	2,965.33
1970	4,634.85	3,985.25
1974	9,937.50	6,728.17
1977	16,143.95	8,894.74
1980	24,944.10	10,127.30
1981	30,645.40	11,246.86
1982	32,758.75	11,400.04
1984	40,821.60	13,103.73
1985	44,270.85	13,723.96
1986	47,555.85	14,456.98
1987	54,516.40	15,755.24
1988	57,221.05	15,881.50

**PART 3: A LISTING OF LARGE STATE-OPERATED RESIDENTIAL FACILITIES FOR  
PERSONS WITH MENTAL RETARDATION AND RELATED CONDITIONS (MR/DD) AND UNITS  
FOR PERSONS WITH MR/DD IN LARGE STATE-OPERATED RESIDENTIAL  
FACILITIES PRIMARILY SERVING OTHER POPULATIONS AS OF DECEMBER 31, 1990**

**Methodology**

States were surveyed by mail to correct and update directory listings compiled from known sources of all large state-operated residential facilities (16 or more residents) for persons with MR/DD, and units for persons with MR/DD in large state-operated residential facilities primarily serving other populations, existing in 1960 and opened since 1960. In a number of cases further information was obtained from state agency staff through telephone contact. Responses were obtained from all states surveyed. A directory was then compiled containing the name, location, year opened to serve persons with MR/DD, year closed if closed since 1960, and year of planned closure if projected to close by the end of Fiscal Year 1995 of each listed facility.

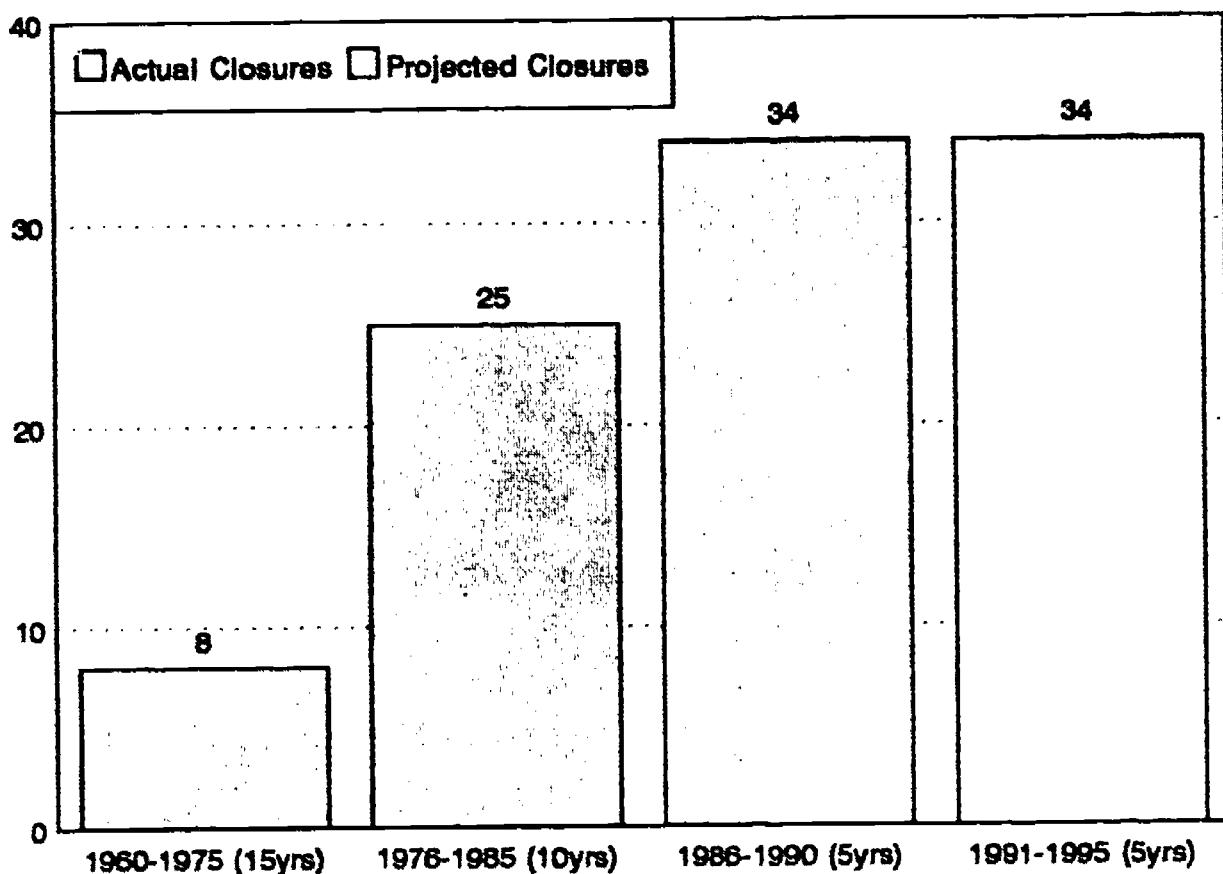

**Findings**

Overall, the national trend of facility closures continued. Twenty-four states reported closure of a total of 67 large state-operated residential facilities and units for persons with MR/DD since 1960 and 18 states reported plans to close a total of 34 large state-operated residential facilities and units for persons with MR/DD between January 1, 1991 and June 30, 1995. In sum, of the 341 large state-operated residential facilities and units listed in this directory, 101 (29.6%) either were closed or were projected to close by the end of Fiscal Year 1995. Of all reported closures, 34 (50.7%) occurred in the period 1987-1990. States reported that 68 facilities and units (67% of all facilities and units closed since 1960) will have been closed between 1987 and 1995. Figure 3.1 illustrates this trend.

Actions to close large state-operated residential facilities and units for persons with MR/DD were unevenly distributed among states. Twenty-one states (41.2%) had not closed nor had plans to close, any large state-operated residential facilities or units for persons with MR/DD. For the most part these were smaller states which had only one or two institutions. However, New Hampshire planned to and accomplished closure of its only remaining state institution for persons with MR/DD in 1991.

It should be noted that a state's report of current and projected status of large state-operated residential facilities and units for persons with MR/DD may best be understood in the broader context of overall changes in the state's service system for persons with MR/DD (e.g., decreases in resident populations of large ICFs-MR and other large residential facilities). Examination of data in Parts 1 and 2 of this report may be helpful in providing perspective for considering data reported in Part 3.

## APPENDIX A

### State Notes

CA First admission data may include some individuals who previously lived in a state-operated facility but had been discharged. Per diem costs are based on midyear rates.

CO Movement and cost data for small and large facilities are combined in Colorado reports. Releases include transfers. Admission data are no longer collected by first admission and readmission.

GA Georgia has eight physically separate facilities that are considered to be separate for licensing purposes. Two of the facilities have "sister" facilities that share administration. Southwestern State Hospital Thomasville (a mental health facility with a unit serving persons with mental retardation) shares administration with Bainbridge State Hospital and School (a facility exclusively for persons with mental retardation). Georgia Retardation Center-Atlanta shares administration with Georgia Retardation Center-Athens. Both of these facilities serve only mentally retarded populations. Georgia also has group residences that are state funded, contracted to local Boards of Health for operation, and staffed by county employees who work under state guidelines and the state merit system. These facilities are not included in this report.

MS Small (1-6 bed) facilities include apartment units as well as small group homes.

NY Data are for fiscal year ending March 31.

TX Data are reported for fiscal year ending on August 31. The reported average daily population estimates were used also for beginning and end of year population estimates.

## APPENDIX B

### Procedures, Assumptions, and Limitations in Longitudinal Data Presentation

The following notes refer to the statistics used to develop Figures 2.1-2.4 of Part 2 of this report. The notes appear under the Figure to which they pertain. Full citation of these documents referred to here are found in the "References" section of this report.

*Figure 2.1: Average Daily Population of in Large State-Operated Mental Retardation Facilities.*

Data presented in Figure 2.1 for years 1950, 1955, 1960, 1965, and 1967 are from the National Institute of Mental Health, "Patients in Institutions." Data for nonreporting facilities were proportionally adjusted from the data of reporting facilities. Data for 1970 are from Office of Mental Retardation (Current Facility Reports) and NIMH (1975). Data for 1973 are from Scheerenberger (1974) and NIMH (1975). Data for 1977 are from Scheerenberger (1978) and NIMH (1979). Data for 1978-1990 are from the Recurring Data Set Project of the Center for Residential Services and Community Living in this series.

Because of the rapidly dwindling numbers of people with mental retardation in mental hospital units not primarily for people with mental retardation, and because of the tendency toward regionalization of state facilities (whereby a facility is used for both mentally retarded and mentally ill populations in a particular catchment area), a clear distinction between PRF/MR and PRF/Other cannot always be made. For example, in FY 1986 state-operated facilities in both Minnesota and Indiana were reclassified from PRF/Other to PRF/MR. For comparability in the most recent statistics, data from the Minnesota and Indiana facilities classified as PRF/Other before 1986, but as PRF/MR since 1986, have been incorporated into the longitudinal movement data from 1984 on. Some minimal duplicative counting may have occurred in the 1960s and 1970s in the statistics of mental retardation facilities and units for people with mental retardation within mental health facilities. After 1977 state reported statistics on PRF/Other evidenced two problems leading to some degree of undercounting: 1) a number of states were unable to report statistics on persons with mental retardation in PRF/Other, and 2) respondents were asked only to report persons with mental retardation in facilities with 10 or more mentally retarded residents (until 1987). The former problem has improved considerably in the last few years, the latter has a minor effect on statistical trends after 1977.

Totals for the mentally retarded population of PRF/Other for nonreporting facilities for the years 1950-1977 were estimated from the totals of reporting facilities. During this period, the facility response rate for the annual NIMH surveys was never less than 87.7%. Totals for the mentally retarded population of PRF/Other for nonreporting states for the years 1980-1986 were estimated from the totals of reporting states. During this period the number of states not reporting PRF/Other populations ranged from 2 to 8. In FY 1987, average daily residents of PRF/Other were estimated by 12 states, in 1988 by 10 states, in 1989 by 12 states and in 1990 by 10 states. States providing estimates for FY 1990 are indicated by an "e" in Part 1.

*Figure 2.2: Average Daily Population of Large State-Operated Mental Retardation Facilities per 100,000 of the General Population.*

The statistics presented in Figure 2.2 are drawn from the same sources as the statistics presented in Figure 2.1. The average daily resident population statistics have been indexed by the Bureau of the Census population statistics for U.S. population in 100,000s for each year presented in Figure 2.1. (See Bureau of the Census. *Statistical Abstract of the United States* [annual]. Washington, DC: U.S.

Government Printing Office.) The value of these statistics is that it controls increases and decreases in the use of state institutions for growth in population.

*Figure 2.3: Movement Patterns in Large State-Operated Mental Retardation Residential Facilities.*

Data for total admissions, discharges, and deaths are from National Institute of Mental Health reports from 1950-1967, Administration on Developmental Disabilities surveys for 1968-1970; National Association of Superintendents (Scheerenberger) survey for 1974; Center for Residential Services and Community Living surveys for 1978-1990. Estimations were made for nonreporting states by assuming rates of first admissions, readmission, discharge and death equal to those of reporting facilities.

*Figure 2.4: Average Annual Per Resident Cost of Care in Large State-Operated Mental Retardation Facilities.*

Data for Figure 2.4 come from the same sources as the statistics on populations of state-operated mental retardation facilities reported in Figure 2.1. Missing data were minimal (reporting rates were 95% or greater for data elements). Because points are means of state averages until 1984, no adjustments were made for nonreporting facilities. State cost statistics for 1984 through 1990 have been weighted by the number of PRF/MR residents in that state. Adjustments of cost to 1967 dollars are based on the Department of Labor's Consumer Price Index multipliers, as reported in the Statistical Abstract of the United States (published annually by the U.S. Bureau of the Census).
